

Global Shapers Annual Survey 2016 Data Set Workbook

Updated: 1 February 2017

Thank you for showing interest in the Global Shapers Annual Survey 2016 results. As promised, the data set is available publicly. This data was collected by volunteers across the world with the Global Shapers Community Foundation working closely with Survey Affiliates to ensure that the data is of high quality. We hope that the data brings richer and deeper insights into activities that can benefit from integrating youth perspectives.

Disclaimer: A number of survey questions provided open text fields to allow respondents to provide written feedback. We have chosen to remove these open text fields from the publicly available data. Given that the survey was completed in 9 different languages, work to process the open text field contributions is still undergoing. We are willing to collaborate with experts who would like to contribute to this exercise.

The package provides three csv files.

1. GS_AS2016_DataSet.csv

Rows: 20081, Columns: 488, Header Rows: 2

This is the data set for the 20079 survey responses which are considered complete out of the total of 26615 responses received.

The first header row gives a description of the question and answer choices available (partial information).

The second header row gives a unique identification tag to each column/question that allows an easier navigation in the QuestionMapping.csv file provided in this package.

2. QuestionMapping.csv

Rows: 488, Columns: 6, Header Rows: 1

The file explains the content of the GS_AS2016_DataSet.csv file:

- Column 1 is the corresponding column number in GS_AS2016_DataSet.csv.

- Column 2 is the corresponding 1st row column header in GS_AS2016_DataSet.csv and gives the survey question as well as a partial view of available answer choices.
- Column 3 is the corresponding 2nd row column header in GS_AS2016_DataSet.csv and consists in a unique question string identifier.
- Column 4 is a descriptive text for the question providing useful information for the analysis (e.g. states the question type).
- Column 5 is the list of answer choices for the question in Column 2.
- Column 6 states if there is a logic associated with the question.

For questions that allow multiple answer choice selections, there will be in this description file as many rows for that question as there are answer choices. Each question is identified by unique identifier with the format QIDXXX-* (e.g. QID107 or QID203-1, QID203-2, etc.).

3. ListOfCountriesAndTerritories.csv

Rows: 242, Columns: 5, Header Rows: 2

This file gives the full list of countries and territories provided as answer choices in the survey. It also provides the UN region and World Economic Forum sub-region categorisation.

When this Data or any of the findings is shared or reproduced, it must appear accurately and be attributed using either Global Shapers Annual Survey 2016 and/or #ShapersSurvey. This source attribution requirement is attached to any use of Data, whether obtained directly from the World Economic Forum or from any other source. Please see the Terms of Use section in the #shaperssurvey PDF report (on page 2).
